Audi A6 Engine Fault

The Audi only had one previous owner and the mileage of the car was around 170,000 - a high figure, but not something that should have caused an issue in this case. In the workshop we had to consider all the factors that could be responsible for the low pressure generation, such as: fuel supply, a blocked fuel filter,

excessive leak across the injectors, a faulty pressure regulator or faulty pressure pump.

A6s that feature V6 and V8 engines use a complex system of chains to keep the 4 valves per cylinder in time. These chains have plastic guides linking to the hydraulic pistons, which have been known to fail, causing misfiring and stalling in the engine. If you do not catch this problem early enough, it could lead to you needing a complete new engine.
