Distributive property (practice) | Khan Academy

The distributive property tells us how to solve equations or expressions in the form of $a(b + c)$. In other words, we are multiplying and adding which when done, will provide us with the exact same answer. Here is a quick example: $2(3 + 5)$ can be expressed as $2(8)$ and with the order of operations which you are most likely familiar with, becomes 16. In other words, we are simply adding what is inside the parentheses and then multiplying the value prior to those parentheses, okay? Now ...
