The Centre for Environmental Modelling And Computation (CEMAC) is a hub for research computing expertise within the School of Earth & Environment (SEE) at the University of Leeds. CEMAC aims to be the UK's leading centre for modelling, computation and environmental data processing.

CEMAC | Centre for Environmental Modelling And Computation

The purpose of mathematical model building and modeling is to simulate the behavior of the environmental system being modeled. Models are built to represent the system behavior in a controlled and cost effective computational environment. In this sense, modeling has become a common building block of most scientific applications.

The solution of typical problems in environmental research is closely connected with numerical supercomputing. The main subject of the seminar was the modeling and numerical simulation of ground water and soil water.

Modeling and Computation in Environmental Sciences ...

Computational modeling is the use of computers to simulate and study complex systems using mathematics, physics and computer science. A computational model contains numerous variables that characterize the system being studied. Simulation is done by adjusting the variables alone or in combination and observing the outcomes.

Computational Modeling

Modeling in courses that incorporate computation can help students better understand physical systems. Conceptualizing a model gives students the opportunity to define inputs/outputs, conservative quantities, discretization, and boundary and initial conditions.

Modeling - Teaching Computation in the Sciences Using MATLAB

Applied Mathematical Modelling focuses on research related to the mathematical modelling of engineering and environmental processes, manufacturing, and industrial systems. A significant emerging area of research activity involves multiphysics processes, and contributions in this area are particularly encouraged.
