This Atlas will be an essential reference for researchers in a range of disciplines, both academic and commercial, working with zebrafish as a model system for development and/or human disease. It will also be useful as a resource for students in developmental biology, molecular genetics, toxicology, anatomical physiology, embryology, etc.

Atlas of Zebrafish Development - 1st Edition

To address this knowledge gap, we produced an Atlas using single-cell RNA-sequencing methods to investigate gene expression from the pharyngula to early larval stages in developing zebrafish. Our single-cell transcriptome Atlas encompasses transcriptional profiles from 44,102 cells across four days of development using duplicate experiments that confirmed high reproducibility.

The atlas of zebrafish organogenesis presented here is a tool for researchers to investigate gene expression, developmental trajectories, and identify cell types in developing zebrafish. Our profiling of 44,102 cells spanning one to five days post fertilization provide transcriptional insight into how all of the major organs form in this vertebrate system.
