The term "bleeding the brakes" refers to the process in which a small valve is opened at the caliper (or wheel cylinder) to allow controlled amounts of brake fluid to escape the system. (When you think about it, "bleeding" may appear to be a somewhat graphic term, but it aptly describes the release of a vital fluid.)

If you plan to bleed by using the pedal pump method, I recommend placing a block of wood under the pedal. The problem that causes the master cylinder to fail is the fact that when you bleed by pumping the brakes, the pedal travels more than it normally does during regular braking, and as such damages the seals and causes an internal leak.
