A Storage Area Network (SAN) is a specialized, high-speed network that provides block-level network access to storage. SANs are typically composed of hosts, switches, storage elements, and storage devices that are interconnected using a variety of technologies, topologies, and protocols. SANs may also span multiple sites.

What Is a Storage Area Network (SAN)? | SNIA

A storage area network or storage network is a computer network which provides access to consolidated, block-level data storage. SANs are primarily used to access storage devices, such as disk arrays and tape libraries from servers so that the devices appear to the operating system as direct-attached storage. A SAN

typically is a dedicated network of storage devices not accessible through the local area network. Although a SAN provides only block-level access, file systems built on top of SANs d
