International experts provide a comprehensive picture of the principles, concepts and methods that are applicable to problems originating from the interaction between the living/non-living environment and mankind. Both the analysis of such problems and the way solutions to environmental problems may work in specific societal contexts are addressed. Disciplinary approaches are discussed but there is a focus on multi- and interdisciplinary methods. A large number of practical examples and case studies are presented. There is special emphasis on modelling and integrated assessment. This book

is different because it stresses the societal, cultural and historical dimensions of environmental problems. The main objective is to improve the ability to analyse and conceptualise environmental problems in context and to make readers aware of the value and scope of different methods. Ideal as a course text for students, this book will also be of interest to researchers and consultants in the environmental sciences.

Environmental Ethics and Philosophy *Edward Elgar Pub*

'Sustainability' and 'sustainable development' have become key phrases of the politics of the environment. They are at the centre of much environmental discourse and indeed of the series of which this collection is a part. This major volume brings together a number of recent papers that address the ethical and political assumptions that underlie different uses

of those concepts. Part I examines equality and justice. Part II focuses on justice, equality and future generations. Part III deals with the moral considerability of the non-human world and Part IV looks at environmental justice. Part V examines economic valuation and Part VI discusses sustainability. Part VII covers sustainability and nature. This volume will be an invaluable source of reference for scholars of environmental economics, environmental political theory, environmental ethics and geography, and all those concerned with the philosophical foundations of sustainability.
