What is a Neutralization Reaction? A neutralization reaction can be defined as a chemical reaction in which an acid and base quantitatively react together to form a salt and water as products. In a neutralization reaction, there is a combination of H^+ ions and OH^- ions which form water. A neutralisation reaction is generally an acid-base

neutralization reaction.

Answer: The reaction of an acid and a base is called a neutralization reaction. Although acids and bases have their own unique chemistries, the acid and base cancel each other's chemistry to produce a rather innocuous substance—water. In fact, the general reaction between an acid and a base is. $\text{acid} + \text{base} \rightarrow \text{water} + \text{salt}$.

neutralization reaction is a chemical reaction between an acid and a base which produces a more neutral solution (closer to a pH of 7). The final pH depends on the strength of the acid and base in the reaction. At the end of a neutralization reaction in water, no

excess hydrogen or hydroxide ions remain.
