What is Generalized Structured Component Analysis (GSCA) GSCA is a component based structural equation model method and can be used as PLS Path Modeling. This method introduced by Hwang and Takane (2011), allows to optimize a global function using an algorithm called Alternating Least Square algorithm (ALS). GSCA lies in the tradition of component analysis. It substitutes components for factors as in PLS.

Generalized Structured Component Analysis - ERIC

Generalized structured component analysis (GSCA) is a component-based approach to structural equation modeling (SEM), where latent variables are approximated by weighted composites of indicators. It has no formal mechanism to incorporate errors in indicators, which in turn renders components prone to the errors as well.

Abstract We propose an alternative method to partial least squares for path analysis with components, called generalized structured component analysis. The proposed method replaces factors by exact linear combinations of observed variables. It employs a well-defined least squares criterion to estimate model parameters.
