Aqueous solutions are known by the solutions conductivity, in other words, the power to conduct electricity. These solutions are split up into two categories, electrolytes and non-electrolytes. The electrolytes can be classified as strong or weak. These classifications are depended on how much of the ions are in the solution.

Electrolysis is the passage of an electrical current through a molten salt or an aqueous solution of the salt. This

Conductivity of Solutions- Chem 101 Lab - 1 | Ionic ...

Conductivity is a measure of how well a solution conducts electricity. To carry a current a solution must contain charged particles, or ions. Most conductivity measurements are made in aqueous solutions, and the ions responsible for the conductivity come from electrolytes dissolved in the water.

THEORY AND APPLICATION OF CONDUCTIVITY

Aqueous solutions can be classified as polar or nonpolar depending on how well they conduct electricity. Most chemical reactions are carried out in solutions, which are

homogeneous mixtures of two or more substances.
