High-frequency rTMS enhances local neural activity, whereas low-frequency rTMS suppresses the activity. These effects reflect alterations in synaptic efficiency, which are the basis of brain plasticity. It seems optimal to combine rTMS and intensive rehabilitation, since rTMS can "precondition" the brain to be more responsive to rehabilitation. With the application of rTMS, brain plasticity would be enhanced and the development of reorganization could be expected.

For our aphasic patients, functional MRI with language tasks is introduced. Based on the finding of the functional MRI, the application site of low-frequency rTMS is determined as "neuroimaging-based rTMS strategy." The combination protocol of rTMS and speech therapy can be a novel therapeutic intervention for poststroke aphasia.

Low-frequency rTMS is applied to the nonlesional hemisphere. Intensive occupational therapy consists of one-to-one training and self-exercise. So far, the protocol seems safe and significantly improves motor function of the paretic upper limb in 15 days. The rTMS can reduce the spasticity in the affected upper limb.

rTMS for Upper Limb Hemiparesis after Stroke | SpringerLink

Abstract Background: Both low-frequency repetitive transcranial magnetic stimulation (rTMS) and intensive occupational therapy (OT) have been recently reported to be clinically beneficial for post-stroke patients with upper limb hemiparesis. Based on these reports, we developed an inpatient combination protocol of these two modalities for the treatment of such patients.
