Shortly after, Roberto Colombo of LMP developed the first twin screw extruders in Italy. Process. In the extrusion of plastics, the raw compound material is commonly in the form of nurdles (small beads, often called resin) that are gravity fed from a top mounted hopper into the barrel of the extruder. Additives such as colorants and UV inhibitors (in either liquid or pellet form) are often used and can be mixed into the resin prior to arriving at the hopper.

Plastic extrusion - Wikipedia

Machines with twin-screw extruder technology provide accurate control of temperature profiles, higher convective heat transfer, and narrower residence time distribution; hence, they offer better control of process parameters. Moreover, the lower dispersion of shear rates and strain helps to effectively control shear-time-temperature.
