Reinforcement Learning For Online Control

In the paper "Information Theoretic Regret Bounds for Online Nonlinear Control," researchers bring strategic exploration techniques to bear on continuous control problems. While reinforcement learning and continuous control both involve sequential decision-making, continuous control is more focused on physical systems, such as those in aerospace engineering, robotics, and other industrial applications, where the goal is more about achieving stability than optimizing reward, explains ...

This online learning system improves its performance over time in two aspects: 1) it learns from its own mistakes through the reinforcement signal from the external environment and tries to reinforce its action to improve future performance; and 2) system states associated with the positive reinforcement is memorized through a network learning process where in the future, similar states will be more positively associated with a control action leading to a positive reinforcement.

Reinforcement Learning for Online Control of Evolutionary ...

Reinforcement learning (RL) is a type of machine learning technique that has been used extensively in the area of computing and artificial intelligence to solve complex optimization problems. 1, 2 Due to its successes, there have been concerted efforts by researchers in the control community to explore the overlap between RL and optimal control theory, which usually involves solving the general-purpose Hamilton-Jacobi Bellman (HJB) equations. The conventional approach to optimal control ...

Abstract: This paper focuses on a systematic treatment for developing a generic online learning control system based on the fundamental principle of reinforcement learning or more

specifically neural dynamic programming. This online learning system improves its performance over time in two aspects: 1) it learns from its own mistakes through the reinforcement signal from the external environment and tries to reinforce its action to improve future performance; and 2) system states associated ...

Due to its generality, reinforcement learning is studied in many disciplines, such as game theory, control theory, operations research, information theory, simulation-based optimization, multi-agent systems, swarm intelligence, and statistics. In the operations research and control literature, reinforcement learning is called approximate dynamic programming, or neuro-dynamic programming.
