### **Chapter 11 Downstream Processing - Biomanufacturing**

4 DOWN STREAM PROCESSING 4.1

INTRODUCTION Industrial fermentations  
 comprise both upstream (USP) and  
 downstream processing (DSP) stages  
 (Fig. 4.1). USP involves all factors and  
 processes leading to and including the  
 fermentation and consists of three main  
 areas: the producer organism, the  
 medium and the fermentation process.

### **4 DOWN STREAM PROCESSING - Microbiology**

Downstream processing in  
 pharmaceutical industries is very  
 important because an ineffective  
 downstream process can significantly  
 increase the cost of the whole  
 manufacturing process. Degerman et al.  
 (2008) suggested that recovery and  
 purification of solutes/products are the  
 most expensive processes in  
 pharmaceutical industries, and in some  
 cases, its cost is higher than the whole  
 bioprocess.
