Parturient hypocalcaemia. Based on a conference on ...
Parturient paresis (also known as milk fever and hypocalcemia) in dairy cows is a complex metabolic disorder characterized by the sudden development of hypocalcemia and hypophosphatemia near the onset of parturition and lactation. Biochemical and ultrastructural studies indicate that the parathyroid glands do respond to the hypocalcemia with increased synthesis and secretion of PTH, but bone resorption remains minimal.

Calcium Homeostasis and Parturient Hypocalcemia: An ...
The most common cause of hypocalcemia is hypoparathyroidism, which occurs when the body secretes a less-than-average amount of parathyroid hormone (PTH). Low PTH levels lead to low calcium levels...

Hypocalcemia: Definition and Patient Education
This state of metabolic alkalosis with increased blood pH predisposes cows to hypocalcemia by altering the conformation of the PTH receptor, resulting in tissues less sensitive to PTH. Lack of PTH responsiveness prevents effective use of bone calcium, prevents activation of osteoclastic bone resorption, reduces renal reabsorption of calcium from the glomerulus, and inhibits renal conversion to its active form.

Parturient Paresis in Cows - Metabolic Disorders ...
Derangements above (hypercalcaemia) and below (hypocalcaemia) this level interfere with the normal function of most body cells but nerve and muscle cells in particular. In the hypocalcaemic state, about 40% of plasma calcium is bound to albumin.

Hypocalcaemia. Calcitonin preparation and ... - Patient
The experimental induction of parturient of parturient hypocalcemia by the prepartal administration of EHDP provides a valuable model for studies to investigate the mechanisms in bone responsible for the development of severe hypocalcemia that occurs in response to the increased calcium demand imposed by parturition and the initiation of lactation.
