Precipitation Reactions Solubility Rules Lab

As a result of all experiments, it would be able to infer how the solubility rules could be used to explain the products of each precipitation reaction. A precipitation reaction results in the formation of an insoluble product. Whether a precipitate, an insoluble solid that separates from the solution, will form depends on the solubility of the solute. Precipitation reactions usually involve ionic compounds, and although all ionic compounds are strong electrolytes they are not equally soluble.

Chemistry Lab Report - Solubility Rules and Precipitation

... Precipitation Reactions and Solubility Rules. A precipitation reaction is one in which dissolved substances react to form one (or more) solid products. Many reactions of this type involve the

exchange of ions between ionic compounds in aqueous solution and are sometimes referred to as double displacement, double replacement, or metathesis reactions. These reactions are common in nature and are responsible for the formation of coral reefs in ocean waters and kidney stones in animals.

... Predicting Precipitates Using Solubility Rules. Some combinations of aqueous reactants result in the formation of a solid precipitate as a product. However, some combinations will not produce such a product. If solutions of sodium nitrate and ammonium chloride are mixed, no reaction occurs. One could write a molecular equation showing a double-replacement reaction, but both products, sodium chloride and ammonium nitrate, are soluble and would remain in the solution as ions.

Predicting Precipitates Using Solubility Rules | Chemistry

... By the end of this lab, students should be able to: Describe precipitation reactions from the molecular perspective; Record detailed observations for a reaction. Predict if a precipitate will form when combining two solutions. Predict when a chemical reaction will result in the formation of a gas.

__ SOLUBILITY RULES

In this laboratory, you will perform a number of microscale chemical reactions to determine which anions form insoluble compounds with various cations. The results will be used to formulate a table of solubility rules. Since the reactions will be done with ions in solution, the solutions must be prepared from compounds that are soluble.

Lab 3 - Solubility Rules

Lastly, to make predictions about precipitation reactions, it is important to remember solubility rules. The following solubility chart gives a useful summary: Solubility chart : To determine the solubility of an given salt, find the cationic component along the left-hand side, match it to the anionic component along the top, then check to see if it is S – soluble, I – insoluble, or sS – slightly soluble.

Precipitation Reactions | Boundless Chemistry

Precipitation reactions occur when cations and anions in aqueous solution combine to form an insoluble ionic solid called a precipitate. Whether or not such a reaction occurs can be determined by using the solubility rules for common ionic solids. Because not all aqueous reactions form precipitates, one must consult the solubility rules before determining the state of the products and writing a ...
