The endocrine system controls long-term and short-term changes of the body and many of the daily activities of the body. The system is made up of glands, which are organs that produce and secrete chemicals. Endocrine glands release chemicals called hormones into the bloodstream, which will then be carried throughout the body.

**The Endocrine system and
Reproduction. 8th

The endocrine system is a system of glands that release chemical messenger molecules called hormones into

the bloodstream. Other glands, called exocrine glands, release substances onto nearby body surfaces through ducts.

Endocrine hormones travel more slowly than nerve impulses, which are the body's other way of sending messages.
