Place the cup underneath the fluorescent light and start the timer. At the end of each minute, record the number of floating disks. Continue until all of the disks are floating or until 20 minutes have passed. 10.

Answers: In the floating leaf disk assay, you placed several floating disks in a dark area for several minutes. Why do you expect the leaf disks in the treatment to sink? Cellular respiration uses up the oxygen that would otherwise cause the disks to "float".

Tap the syringe to suspend the leaf disks in the solution. o Holding a finger over the syringe-opening, draw back on the plunger to create a vacuum. Hold this vacuum for about 10 seconds. While holding the vacuum, swirl the leaf disks to suspend them in the solution. Let off the vacuum.

procedure has shown that the point at which 50% of the disks are floating (the median or ET 50) is a reliable and repeatable point of reference. In this case, the disks floating are counted at the end of each time interval. The median is chosen over the mean as the summary statistic. The median will generally provide a better estimate of

Push on the plunger until only a small volume of air and leaf disk remain in the barrel ($< 10\%$). Pull a small volume of sodium bicarbonate solution into the syringe. Tap the syringe to suspend the leaf disks in the solution. Holding a finger over the syringe-opening, draw

back on the plunger to create a vacuum.

Floating Leaf Disk Assay - BIOLOGY JUNCTION

The leaf disks should float in the solution (see photos below). Hold the syringe with the tip up, and expel the air by gently pushing on the plunger. Plug the tip of the syringe tightly with your finger, and gently pull on the plunger, creating a slight vacuum. You should see tiny bubbles coming out of the leaf disks.

Photosynthetic Floatation: Biology & Physics Science ...

A. Through the experiment we saw that leaf discs that are not in the presence of sodium bicarbonate no leaf discs floated to the top. When in the presence of sodium bicarbonate leaf discs

immediately started to float up. At minute 10 half of the leaves were floating. Then at minute 20 all of the discs were floating.

Meaning, the greater the light intensity, the faster the rate of photosynthesis. So the vial closest to the light source should in theory have the fastest rate of photosynthesis, or in other words, have the most leaf disks floating at the end (or have the leaf disks that floated in the shortest amount of time.

Hypothesis: The leaf disks placed in the

water solution with sodium bicarbonate will float to the top faster and in a higher quantity because the sodium bicarbonate will serve as a source of carbon dioxide for photosynthesis. Independent Variable. Dependent Variable. Method for measuring changes in D.V. Control Group.

Photosynthesis Lab - AP BIOLOGY FINAL

Dip the paper disk in the yeast solution. The yeast solution provides a set amount of catalase per disk. Drop the disk into a solution of hydrogen peroxide. The catalase breaks down the hydrogen peroxide into water and oxygen. The oxygen bubbles catch in the paper fibers and eventually cause the disk to rise.

Record the number of floating discs at 30 second intervals. Then swirl the discs to dislodge any that are stuck against the sides of the cups. Continue until all of the discs in the bicarbonate cup are floating. Dump all materials into the lab sink.

The Floating Leaf Disk Assay for Investigating Photosynthesis

Normally, disks punched out of leaves (with a hole punch) would float. When the air spaces are infiltrated with a sodium bicarbonate solution, the overall density of the leaf disks increase and they sink. Bicarbonate ion serves as the carbon source for photosynthesis. As photosynthesis proceeds, oxygen is

released into the interior of the leaf, which changes the buoyancy- causing the disks to rise.

Leaf Disk TM - Gulf Coast State College

Scientists have found an easy way to measure the rate of photosynthesis in plants. The procedure is called the floating leaf disk assay. In this plant biology project, you can use this procedure to investigate which factors affect the rate of photosynthesis. Do you think the light intensity, type of plant, or the temperature matter?
