One reactant will be completely used up before the others. The reactant used up first is known as the limiting reactant. The other reactants are partially consumed where the remaining amount is considered "in excess". This example problem demonstrates a method to determine the limiting reactant of a chemical reaction.

Determine limiting and excess reagent and the amount of unreacted excess reactant. a) 3 atoms of carbon combine with 4 molecules of hydrogen to produce methane ( $\text{CH}_4$ ) b) 7 molecules of hydrogen and 2 molecules of nitrogen gases react to produce ammonia

### **Stoichiometry: Limiting Reagent Problems #1 - 10**

The limiting reactant or limiting reagent is the first reactant to get used up in a chemical reaction. Once the limiting reactant gets used up, the reaction has to stop and cannot continue and there is extra of the other reactants left over. Those are called the

excess reactants. We will learn about limiting reactant and limiting reagent by comparing chemical reactions to cooking recipes and we will look at an actual stoichiometry problem.

A comprehensive problem on reaction stoichiometry: mole ratio, limiting reactant, percent yield and amount of reactants needed. Aspirin (acetyl salicylic acid) is widely used to treat pain, fever, and inflammation. It is produced from the reaction of salicylic acid with acetic anhydride. The chemical equation for aspirin synthesis is

shown below: In one container, 10.00 kg of salicylic acid is mixed with 10.00 kg of acetic anhydride.

Example #1: Here's a nice limiting reagent problem we will use for discussion. Consider the reaction:  $2\text{Al} + 3\text{I}_2 \rightarrow 2\text{AlI}_3$ . Determine the limiting reagent and the theoretical yield of the product if one starts with: (a) 1.20 mol Al and 2.40 mol iodine.

### ChemTeam: Stoichiometry: Limiting Reagent Examples

As stated in the problem, there is going to be some  $\text{H}_2$  left over after the reaction is complete, so this

tells us that  $H_2$  is in excess and  $N_2$  is the limiting reactant. Remember, limiting reactant is consumed completely in a chemical reaction. Remember also that stoichiometric calculations need to be done based on the moles of limiting reactant, so let's first determine the limiting reactant. Limiting reactant: Now, let's determine which reactant will produce less ammonia. It would be ...

### **Limiting Reactant in the Stoichiometry of Chemical Reactions**

Reactions that take place in the real world go until one of the reactants is used up.

The reactant that is used up first is called the limiting reactant (LR) because it limits how much product can be made. The reactant that is left over is called the excess reactant (ER). To solve LR/ER problems, use the following guidelines: 1.
