Structural health monitoring - Wikipedia

Structural health monitoring (SHM) is a process of assessing the health of a structure through a smart and automatic monitoring system. An ageing structure incurs more cost with time, and this has become

an ongoing concern. Studies show that the United States utilizes way over \$200 billion every year on plant equipment and structures maintenance.

Sam Cocking, a PhD student at the Centre for Smart Infrastructure & Construction working under the supervision of Prof Matthew DeJong, reports on a structural health monitoring project in collaboration with AECOM and Network Rail, which is bringing smart innovation to a heritage asset. Sensing technologies are enabling asset owners to learn more about the structural performance of

heritage assets and, alongside data analytics, provide valuable insights to inform better decision-making.
