Biomechanical examination of the foot - PubMed

Foot assessment is a common approach in clinical practice for classifying foot type with a view to identifying possible aetiological factors relating to injury and prescribing therapeutic interventions. This approach is underpinned by a contextual model of the foot whereby structural alignment, or position of the foot, is used to infer characteristics of dynamic foot function, and theoretically establish injury mechanisms leading to pathology.

In the proposed draft of the changes to the CPME 320 document, requirement 6.0 designates a competency in biomechanics, which does outline some forms of treatment: "Perform biomechanical examination and manage patients with lower extremity disorders utilizing a variety of prosthetics, orthotics, and footwear." 1

Proposed CPME 320 Changes May Dramatically Reduce Required ...

A biomechanical exam for children is a comprehensive assessment of the way the child's body functions while walking. Both static and dynamic tests are conducted to investigate the body's osteo-articular and muscular functions. A biomechanical exam may be conducted as soon as the child has begun to walk. Normal function is assessed differently in children compared to adults.
