The optimization tool is employed using two evolutionary algorithms: genetic algorithms and particle swarm optimization.

The efficacy of the developed model is demonstrated through its application in a case study of Shaker Al-Bahery, Egypt.

Furthermore, evaluation metrics are considered to compare the performance of the aforementioned algorithms.

In , authors categorize the main research topics in which evolutionary algorithms have been used as topology management, broadcasting

algorithms, routing protocols, clustering approaches, protocol optimization, mobility models, selfish behaviors, security issues, and other applications. We follow a similar taxonomy but in this case we focus on the main research topics of MANETs in the last two decades such as topology management, broadcasting, and routing protocols.

An evolutionary algorithm (EA) is an optimization algorithm that has mimicked the biological mechanism such as mutation, recombination, and natural selection to find an optimal design within specific constraints [45].

Evolutionary Algorithms - an overview | ScienceDirect Topics

In computational intelligence (CI), an evolutionary algorithm (EA) is a subset of evolutionary

computation, a generic population-based metaheuristic optimization algorithm. An EA uses mechanisms inspired by biological evolution, such as reproduction, mutation, recombination, and selection. Candidate solutions to the optimization problem play the role of individuals in a population, and the fitness function determines the quality of the solutions (see also loss function).
