Contributions Criminometric Models Statistical Inference

The criminometric model developed permits quantitative analysis of criminal justice phenomena through the integrated application of criminal justice theory, empirical observation, and statistical inference. Abstract:

The model is developed through the interrelated activities of model building, estimation, evaluation, and prediction.

NCJRS Abstract - National Criminal Justice Reference Service

In Section 4 we first discuss hidden Markov models (HMMs) since all statistical models that we consider in the thesis can be treated as HMMs or their generalisation. Since, in general, HMMs involve intractable objects, we then study approximation ways for them based on SMC methods. Statistical inference for HMMs is also considered.
