Game Accessibility A Survey Springer

We consider finite state, finite action, stochastic games over an infinite time horizon. We survey algorithms for the computation of minimax optimal stationary strategies in the zerosum case, and of Nash equilibria in stationary strategies in the nonzerosum case. We also survey those theoretical results that pave the way towards future development of algorithms.

Algorithms for stochastic games — A survey

This paper surveys the research area of cooperative games associated with several types of operations research problems in which various decision makers (players) are involved. Cooperating players not only face a joint optimisation problem in trying, e.g., to minimise total joint costs, but also face an additional allocation problem in how to distribute these joint costs back to the individual ...

Operations research games: A survey

Games are an important part of modern culture. The nature of most video games is such that it can be difficult for individuals with impairments to enjoy many titles. In many cases, this is not due to the games themselves presenting an impossible challenge, but because the games have been left inaccessible through the omission of common features. Mainstream titles are often accessible and ...
