Decanter Centrifuges For Industrial Use

A centrifuge is a device that employs a high rotational speed to separate components of different densities. This becomes relevant in the majority of industrial jobs where solids, liquids and gases are merged into a single mixture and the separation of these different phases is necessary. A decanter

centrifuge separates continuously solid materials from liquids in the slurry, and therefore plays an important role in the wastewater treatment, chemical, oil, and food processing industries. There a

Decanter Centrifuge. The decanter's hour has come as soon as the solids content in the suspension to be processed is particularly high. These machines provide the benefits of high clarifying efficiency and maximum dewatering as well as the separation of liquids with the simultaneous removal of solids. The main requirements in this respect include a high bowl speed, a powerful drive for the scroll and a scroll speed which automatically adapts to the solids loading in the feed.

Decanter centrifuges have a variety of uses. They are primarily clarifiers, suitable for treating suspensions with very high content of solids (40–60%). Basically, decanter centrifuges consist of a solid-wall horizontal bowl with a cylindrical zone and a conical zone (Figure 9.12). The solids move to the wall and the clear liquid to the center.
