- Salts of strong acids and weak bases produce acidic aqueous solutions. • Cations of the dissolved salt are hydrolyzed in the water solvent, and hydronium ion concentration increases. The pH of the solution is lowered. • Salts of weak acids and weak bases can produce either acidic, neutral, or basic aqueous solutions, depending on the salt dissolved. • Both ions of the dissolved salt are hydrolyzed extensively.

When is a salt solution basic or acidic? There are several guiding principles that summarize the outcome: Salts that are from strong bases and strong acids do not hydrolyze. The pH will remain neutral at 7. Halides and alkaline metals dissociate and do not affect the H^+ as the cation does not alter the H^+ and the anion does not attract the H^+ from water. This is why NaCl is a neutral salt.
