Complex Reservoir Fluid Characterisation

Complex reservoir characterization using static low-resolution surveys can mask aberrations and hide detailed aspects of subsurface dynamics and well conditions. However, CoViz 4D has the necessary capabilities to merge multi-disciplinary data into a central system, where geoscientists and engineers can better understand the data.

Overcoming the Challenge of Complex Reservoir Characterization

The modelling incorporates fluid displacement behavior characterized by a force balance between the gas cap expansion, bottom aquifer movement, and multiphase viscous flow in the reservoirs.

SPE Workshop Complex Reservoir Fluid Characterisation ...

Characterizing a reservoir by updating of both static and dynamic reservoir properties during the life of the field is

referred to as dynamic reservoir characterization. Dynamic reservoir characterization is discussed in Chapter 7, dealing with time lapse or 4D geophysical data and reservoir monitoring. This chapter, however, focuses on static reservoir characterization.

At the prevailing reservoir pressure, the swelling factor with hydrocarbon gas is four times higher than for nitrogen. Furthermore, the reservoir fluid density increases during swelling with nitrogen, whereas it decreases as a result of hydrocarbon gas swelling. The same trend is observed for viscosity.
