Name: Mitosis in an Onion Root
Introduction: Mitosis can be observed in cells that are in a state of growth. In this lab, you will observe cells and identify which stage of cell division the cells are in. To help you do this, let's review what characteristics to look for at the different stages. Also remember, interphase is not technically a part of Mitosis, but it is part of the cell cycle ...

Why use onion roots for viewing mitosis? • The roots are easy to grow in large numbers. • The cells at the tip of the roots are actively dividing, and thus many cells will be in

stages of mitosis. • The tips can be prepared in a way that allows them to be flattened on microscopes slide (“squashed”) so that the

LAB EXPERIMENT 4: Mitosis in Onion Root Tip Cells

This lab was an experiment designed to analyze how many cells could be observed in each part of mitosis for different areas of an onion root. First, with a prepared slide, area X and Y were located and each counted and recorded of what stages were observed. Then, another onion root tip was prepared and area Z was located.

somatic cell undergoes a phase called mitosis. Mitosis is the division of the nucleus to form two genetically identical nuclei. There are four phases of mitosis: prophase, metaphase, anaphase and telophase. Prior to mitosis is interphase (when the cell grows and duplicates all organelles), and post-mitosis is cytokinesis (when the cell membrane pinches...
