More recently, inductive inference has been shown to be capable of arriving at certainty, but only in rare instances, as in programs of machine learning in artificial intelligence (AI). [48] [failed verification] Popper's stance on induction being an illusion has been falsified: enumerative induction exists.

Grammar induction (or grammatical inference) is the process in machine learning of learning a formal grammar (usually as a collection of re-write rules or productions or alternatively as a finite

state machine or automaton of some kind) from a set of observations, thus constructing a model which accounts for the characteristics of the observed objects. More generally, grammatical inference is that branch of machine learning where the instance space consists of discrete combinatorial objects ...

inductive learning. Any design process can be viewed as a search for a knowledge structure (a design, in this case) that satisfies given objectives and constraints. Such a process is a form of learning, therefore, ideas and methods developed in the field of machine learning may potentially bring new insights to the understanding of design processes.
