We begin our tour of useful mathematics with what is called the calculus of variations. Many physics problems can be formulated in the language of this calculus, and once they are there are useful tools to hand. In the text and associated exercises we will meet some of the equations whose solution will occupy us for much of our journey.

The sum over three terms $A_x B_x + A_y y + A_z z$ becomes a sum (integral) over a continuous index, the integration variable. By using this integral as a generalization of the ordinary scalar product, you can say that $\sin(x/L)$ and $\sin(2x/L)$ are orthogonal. Let n be an index taking on the values x, y , and z , then the notation A_n
