Godin on Impact Theory

Section 7 3 Energy Changes

A fundamental concept is that every chemical reaction occurs with a concurrent change in energy. Now we need to learn how to properly express these energy changes. Our study of gases in Chapter 6, and our definition of work in Section 7.3, indicate that conditions like pressure, volume, and temperature affect the energy content of a system.

7.3: Enthalpy and Chemical Reactions - Chemistry LibreTexts

Recall that physical changes can release or absorb energy. During an exothermic change, such as freezing,

energy is released to the surroundings. During an endothermic change, such as melting, energy is absorbed from the surroundings. Energy also flows into and out of chemical changes.
