Poincaré and The Three

Poincaré and the Three-Body Problem is a monograph in the history of mathematics on the work of Henri Poincaré on the three-body problem in celestial mechanics.

Poincaré and the Three-Body Problem - Wikipedia

It arose in the work of one of the

greatest mathematicians of the late 19th century, Henri Poincaré, on a problem in celestial mechanics: the three body problem. This ancient problem - to describe the paths of three bodies in mutual gravitational interaction - is one of those which is simple to pose but impossible to solve precisely.

Abstract The purpose of the thesis is to present an account of Henri Poincare's famous memoir on the three body problem, the final version of which was published in Acta Mathematica in 1890 as the prize-winning entry in King Oscar II's 60th birthday competition.

Poincaré and the Three Body Problem - Open Research Online

The Three-Body Problem has been a recurrent theme of Poincaré's thought. Having understood very early the need for a qualitative study of "non-integrable" differential equations, he developed the necessary fundamental tools: analysis, of course, but also topology, geometry, probability.

difficult. Henri Poincaré was perhaps the first to try to make a similar study of three-dimensional manifolds. The most basic example of such a manifold is the three-dimensional unit sphere, that is, the locus of all points (x,y,z,w) in four-dimensional Euclidean space which have distance exactly 1 from the origin: $x^2 + y^2 + z^2 + w^2 = 1$. He noted ...

THE POINCARÉ CONJECTURE' Introduction

The Poincaré algebra is the Lie algebra of the Poincaré group. It is a Lie algebra extension of the Lie algebra of the Lorentz group. More specifically, the proper ($\det \Lambda = 1$), orthochronous ($\Lambda^0_0 \geq 1$) part of the Lorentz subgroup (its

identity component), $SO^+(1, 3)$, is connected to the identity and is thus provided by the exponentiation $\exp(i\alpha_\mu P^\mu) \exp(i\omega_{\mu\nu} M^{\mu\nu}/2)$ of this ...

Poincaré group - Wikipedia

In his research on the three-body problem, Poincaré became the first person to discover a chaotic deterministic system which laid the foundations of modern chaos theory. He is also considered to be one of the founders of the field of topology.

In mathematics, the Poincaré conjecture is a theorem about the characterization of the 3-sphere, which is the hypersphere that bounds the unit ball in four-dimensional space. The conjecture states: Every simply connected, closed

3-manifold is homeomorphic to the 3-sphere. An equivalent form of the conjecture involves a coarser form of equivalence than homeomorphism called homotopy equivalence: if a 3-manifold is homotopy equivalent to the 3-sphere, then it is necessarily homeomorphic to it ...

Poincaré conjecture - Wikipedia

The Pauli spin vector σ is defined using the unit vectors $\hat{e}_j$ in the Stokes space as $\sigma = \sigma_1 \hat{e}_1 + \sigma_2 \hat{e}_2 + \sigma_3 \hat{e}_3$, where the three Pauli matrices are given in Eq. (6.7.7). Using Eqs. (7.6.7) through (7.6.9), the two Stokes vectors are found to satisfy [70]
