Elucidating Mechanisms for the Inhibition of Enzyme Catalysis. When an inhibitor interacts with an enzyme it decreases the enzyme's catalytic efficiency. An irreversible inhibitor covalently binds to the enzyme's active site, producing a permanent loss in catalytic efficiency even if we decrease the inhibitor's concentration.

The inhibition of an enzyme by a product is called feedback inhibition; i.e., a product many steps removed from an initial enzyme blocks its action. Feedback inhibition occurs in many pathways in all living things. Allosteric control can also be achieved by activators. The hormone adrenaline (epinephrine) acts in this way.

In many organisms, inhibitors may act as part of a feedback mechanism. If an enzyme produces too much of one substance in the organism, that substance may act as an inhibitor for the enzyme at the beginning of the pathway that produces it, causing production of the substance to slow down or stop when there is sufficient amount.

Enzyme - Wikipedia

An enzyme inhibitor is a molecule that binds to an enzyme and decreases its activity. By binding to enzymes' active sites, inhibitors reduce the compatibility of substrate and enzyme and this leads to the inhibition of Enzyme-Substrate complexes' formation, preventing the catalyzation of reactions and decreasing (at times to zero) the amount of product produced by a reaction.

Types of Mechanisms of Enzymes: There are two types of mechanisms involved to explain substrate-enzyme complex formation; lock and key theory (template model), and induced-fit theory. (i) Lock and Key Theory: Emil Fischer (1894) explained the specific action of an enzyme with a single substrate using a theory of Lock and Key analog (Fig. 12.11).

Inhibition caused by drugs may be either reversible or irreversible. A reversible situation occurs when an equilibrium can be established between the enzyme and the inhibitory drug. A competitive inhibition occurs when the drug, as "mimic" of the normal substrate competes with the normal substrate for the active site on the enzyme.
