Lab 3 15 Lab 3. Centripetal Force Introduction Those of you who have tied an object to a string and whirled it in a horizontal circle above your head no doubt have recognized that you have to pull on the string and therefore on the object in a direction toward the center of the circle if you wish to have circular motion. This pull or force is called a centripetal force (F_c). You may also have ...

Experiment 6: Centripetal Force
Introduction This experiment is concerned with the force necessary to keep an object moving in a constant circular path. According to Newton's first law of motion there must be forces

acting on an object moving in a circular path since it does not move off in a straight line. The second law of motion ($F = ma$) also indicates forces since an unbalanced force is ...

When the force of gravity is counteracted, possibly by a horizontal spinning table, then the force of tension on the string is only due to the centripetal force and the second term is equal to 0. Linear velocity is kept constant in order to maintain a similarly constant angular velocity and can be written in terms of radians where T is the period:

The centripetal force causing the car to turn in a circular path is due to friction between the tires and the road. A minimum coefficient of friction is needed, or the car will move in a larger-radius curve and leave the roadway. Let us now consider banked curves, where the slope of the road helps you negotiate the curve. See Figure 6.13.

Centripetal force is the component of force acting on an object in curvilinear motion which is directed toward the axis of rotation or centre of curvature. The unit of centripetal force is Newton. The centripetal force is always directed perpendicular to the direction of the displacement of the object.

Centripetal force is the force on a body moving in a circle that points inward toward the point around which the object moves. The force in the opposite direction, pointing outward from the center of rotation, is called centrifugal force. For a rotating body, the centripetal and centrifugal forces are equal in magnitude, but opposite in direction.
