Mitsubishi 4M4 engine - Wikipedia

The position of the injection pump timer piston is controlled so that fuel injection is carried out at the optimum timing in accordance with the engine running condition. The timer piston position is determined by duty control of the timing control solenoid valve which is located

DIESEL FUEL <4M4>

The diesel pump on a DI-D merely pumps fuel at high pressure, into the common rail, it doesn't have a role in the injection timing - that's done by the electronic injectors. It might produce the pressure in pulses, which for completeness ought to be matched more/less to the crank's rotation in some way, but I don't think its critical.
