Differential Equations For Engineers And

The resulting differential equation is $dS/dt = rS + k$, (7.2) which can be solved with the initial condition

$S(0) = S_0$, where S_0 is the initial capital. The differential equation is linear and the standard form is $dS/dt - rS = k$, so that the integrating factor is given by $m(t) = e^{-rt}$. The solution is therefore $S(t) = e^{rt} \left(S_0 - \frac{k}{r} \right) + \frac{k}{r}$.

Differential Equations for Engineers

Differential equations have wide applications in various engineering and science disciplines.

In general, modeling variations of a physical quantity, such as temperature, pressure, displacement, velocity, stress, strain, or concentration of a pollutant, with the change of time or location, such as the coordinates (x, y, z) , or both would require differential equations.

DIFFERENTIAL EQUATIONS FOR ENGINEERS

Differential Equations for Engineers and Scientists is intended to be used in a first course on differential equations taken by science and engineering students. It covers the standard topics on differential equations with a wealth of applications drawn from engineering and science—with more engineering-specific examples than any other similar text.

Differential Equations for Engineers and Scientists

A differential equation is an equation for a function with one or more of its derivatives. We introduce differential equations and classify them. We then learn about the Euler method for numerically solving a first-order ordinary differential equation (ode). Then we learn analytical methods for solving separable and linear first-order odes.

Most physical phenomena, whether in the domain of fluid dynamics, electricity, magnetism, mechanics, optics, or heat flow, can be described in general by partial differential equations. Indeed, such equations are crucial to mathematical physics. Although simplifications can be made that reduce these equations to ordinary differential equations, nevertheless the complete description of physical systems resides in the general area of partial differential equations.
