A study in the Mediterranean showed

that some corals, which seemed to have succumbed to the effects of global warming, managed to grow again, but for that they had to make some sacrifices. We know that corals around the world are in danger for a number of reasons. On the one hand because of the pollution by nitrogen.

In the Mediterranean, corals are "back from the dead"

L. glaberrima is a tall arborescent, bright orange or white, black coral species, among the most common black corals of the Mediterranean basin [22].

Occasionally found at 100 m, it forms dense forests only from 200 m along the rocky bench terraces [23, 24, 52, 60] or among white coral reefs [14, 61].
