Abstract Serious  
 games open up many  
 new opportunities for  
 complex skills learning  
 in higher education.  
 The inherent  
 complexity of such  
 games, though,  
 requires large efforts  
 for their development.  
 This paper presents a  
 framework for serious  
 game design, which  
 aims to reduce the  
 design complexity at  
 conceptual, technical  
 and practical levels.  
 The approach focuses  
 on a relevant subset of  
 serious games labelled  
 as scenario-based  
 games.

One of the most crucial factors for successful educational games is their ability to maintain an individual learner's motivation and interest by adapting the individual learning and gaming experience to each learner's needs, preferences, goals, and abilities (Kickmeier - Rust et al 2011)

### **Educational Games for Learning - ERIC**

The state-space complexity of a game is the number of legal game positions reachable from the initial position of the game. When this is too hard to calculate, an upper bound can often be computed by also counting (some) illegal positions, meaning positions that can

never arise in the course of a game.
