Placidus. The Placidus house system divides the phases of planetary and star movement above and below the horizon into equal-sized parts. A planet on the cusp of the twelfth house, for example, has already passed 1/6 of its so-called diurnal arc, a planet on the eleventh house cusp 2/6, a planet on the MC 3/6 or half of its diurnal arc, etc. The houses below the horizon divide the so-called 'nocturnal arc' of the stars and planets.

The Placidus system of houses, also formerly known as the Ptolemaic Method, is a system that can be described as "Time-proportional House System of Movement". This is in contrast to the space-based systems that are built on astronomical great

circles, rather than on time curves. It gained popularity in the late Renaissance era, yet the origin of the system has not been clarified to this date.
