The 20% Solution

A Practical Guide to Dramatic Cost Reduction in Mrop Procurement *AuthorHouse*

This little Collection of Poems and Songs represents 50 years of the writer's work and "reflective style of living" from age 15 to 65, all but one previously unpublished. The partial product of a small-town childhood and a Midwest education during the post-

war 40's, the politically apathetic but musically revolutionary Rock-n-Roll 50's, and the Socially Revolutionary 60's, with influences as diverse as Mother Goose, Ayn Rand, Buddy Holly, Robert Heinlein, A.A. Milne, Woody Guthrie, Robert Frost, Thoreau, Poe, Bob Dylan, Lewis Carroll, and Walt Kelly's "POGO", among others, known or not, this work covers a wide range of styles from "doggerel" to blank verse to lullabies, and a range of subjects and ideas from observations of nature and people to love-poems, homages, satirical parodies, and meditations on life and death and beyond. Herein you may find silliness and satire, grief and grievances, political commentary, or retrospectives of crossed paths with girls, animals, lakes and mountains, presidents, children, friends and strangers, even ants--not all of them, perhaps, what they first seem to appear, but all special and memorable enough to stand out, or as they do here, stand alone. By the author's own admission, "Certainly there have been ideas, moments, even people missed or forgotten along the way and no doubt much remains to be noted and commented on, but the places I go and the people I 'meet' just continue to 'sing' to me. Many "grab" me immediately, while some "sneak up on me" and surprise me later." Will Rogers was famous for saying, "I never met a man I didn't like!" For Paul, the "operative word" there is "MET": that is: "Discovered"--or came to know and understand--or "saw through" to the "Song" within. "That", he says, "Is how people "sing" to Me--every time I stop to listen--and to Care--as if each were truly unique and each one genuinely mattered!." Meanwhile, "the beat goes on" and the Music never stops. And so, He says, " I'll just keep listening and learning, and sharing --- and trying to "keep in tune" --- perhaps the best is yet to come! --

The One Percent Solution

How Corporations Are Remaking America One State at a Time *Cornell University Press*

In the aftermath of the 2010 Citizens United decision, it's become commonplace to note the growing political dominance of a small segment of the economic elite. But what exactly are those members of the elite doing with their newfound influence? The One Percent Solution provides an answer to this question for the first time. Gordon Lafer's book is a comprehensive account of legislation promoted by the nation's biggest corporate lobbies across all fifty state legislatures and encompassing a wide range of labor and economic policies. In an era of growing economic insecurity, it turns out that one of the main reasons life is becoming harder for American workers is a relentless—and concerted—offensive by the country's best-funded and most powerful political forces: corporate lobbies empowered by the Supreme Court to influence legislative outcomes with an endless

supply of cash. These actors have successfully championed hundreds of new laws that lower wages, eliminate paid sick leave, undo the right to sue over job discrimination, and cut essential public services. Lafer shows how corporate strategies have been shaped by twenty-first-century conditions—including globalization, economic decline, and the populism reflected in both the Trump and Sanders campaigns of 2016. Perhaps most important, Lafer shows that the corporate legislative agenda has come to endanger the scope of democracy itself. For anyone who wants to know what to expect from corporate-backed Republican leadership in Washington, D.C., there is no better guide than this record of what the same set of actors has been doing in the state legislatures under its control.

False Alarm

How Climate Change Panic Costs Us Trillions, Hurts the Poor, and Fails to Fix the Planet *Basic Books*

The New York Times-bestselling "skeptical environmentalist" argues that panic over climate change is causing more harm than good. Hurricanes batter our coasts. Wildfires rage across the American West. Glaciers collapse in the Arctic. Politicians, activists, and the media espouse a common message: climate change is destroying the planet, and we must take drastic action immediately to stop it. Children panic about their future, and adults wonder if it is even ethical to bring new life into the world. Enough, argues bestselling author Bjorn Lomborg. Climate change is real, but it's not the apocalyptic threat that we've been told it is. Projections of Earth's imminent demise are based on

bad science and even worse economics. In panic, world leaders have committed to wildly expensive but largely ineffective policies that hamper growth and crowd out more pressing investments in human capital, from immunization to education. False Alarm will convince you that everything you think about climate change is wrong -- and points the way toward making the world a vastly better, if slightly warmer, place for us all.

In addition, you'll learn about a new set of thought processes for designing and implementing solutions that will reap benefits 20 times greater or faster than the same tired "normal" solutions. Winners Take All

The Elite Charade of Changing the World *Vintage*

The New York Times bestselling, groundbreaking investigation of how the global elite's efforts to "change the world" preserve the status quo and obscure their role in causing the problems they later seek to solve. An essential read for understanding some of the egregious abuses of power that dominate today's news. Former New York Times columnist Anand Giridharadas takes us into the inner sanctums of a new gilded age, where the rich and powerful fight for equality and justice any way they can--except

ways that threaten the social order and their position atop it. We see how they rebrand themselves as saviors of the poor; how they lavishly reward "thought leaders" who redefine "change" in winner-friendly ways; and how they constantly seek to do more good, but never less harm. We hear the limousine confessions of a celebrated foundation boss; witness an American president hem and haw about his plutocratic benefactors; and attend a cruise-ship conference where entrepreneurs celebrate their own self-interested magnanimity. Giridharadas asks hard questions: Why, for example, should our gravest problems be solved by the unelected upper crust instead of the public institutions it erodes by lobbying and dodging taxes? He also points toward an answer: Rather than rely on scraps from the winners, we must take on the grueling democratic work of building more robust, egalitarian institutions and truly changing the world. A call to action for elites and everyday citizens alike.

There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom.” —David Roberts, *Vox* “This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook.” —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. Public Health Consequences of E-Cigarettes *National Academies Press*

Millions of Americans use e-cigarettes. Despite their popularity, little is known about their health effects. Some suggest that e-cigarettes likely confer lower risk compared to combustible tobacco cigarettes, because they do not expose users to toxicants produced through combustion. Proponents of e-cigarette use also tout the potential benefits of e-cigarettes as devices that could help combustible tobacco cigarette smokers to quit and thereby reduce tobacco-related health risks. Others are concerned about the exposure to potentially toxic substances contained in e-cigarette emissions, especially in individuals who have never used tobacco products such as youth and young adults. Given their relatively recent introduction, there has been

little time for a scientific body of evidence to develop on the health effects of e-cigarettes. Public Health Consequences of E-Cigarettes reviews and critically assesses the state of the emerging evidence about e-cigarettes and health. This report makes recommendations for the improvement of this research and highlights gaps that are a priority for future research.

Communities in Action

Pathways to Health Equity *National Academies Press*

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of

communities or support them, as well as the root causes and structural barriers that need to be overcome.

Soundtracks

The Surprising Solution to Overthinking *Baker Books*

Overthinking isn't a personality trait. It's the sneakiest form of fear. It steals time, creativity, and goals. It's the most expensive, least productive thing companies invest in without even knowing it. And it's an epidemic. When New York Times bestselling author Jon Acuff changed his life by transforming his overthinking, he wondered if other people might benefit from what he discovered. He commissioned a research study to ask 10,000 people if they struggle with overthinking too, and 99.5 percent said, "Yes!" The good news is that in *Soundtracks*, Acuff offers a proven plan to change overthinking from a super problem into a superpower. When we don't control our thoughts, our thoughts control us. If our days are full of broken soundtracks, thoughts are our worst enemy, holding us back from the things we really want. But the solution to overthinking isn't to stop thinking. The solution is running our brains with better soundtracks. Once we learn how to choose our soundtracks, thoughts become our best friend, propelling us toward our goals. If you want to tap into the surprising power of overthinking and give your dreams more time and creativity, learn how to DJ the soundtracks that define you. If you can worry, you can wonder. If you can doubt, you can dominate. If you can spin, you can soar.

The Starch Solution

Eat the Foods You Love, Regain Your Health, and Lose the Weight for Good!

Rodale Books

A bestselling author's groundbreaking eating plan that challenges the notion that starch is unhealthy From Atkins to Dukan, the fear-mongering about carbs over the past few decades has reached a fever pitch; the mere mention of a starch-heavy food is enough to trigger a cavalcade of shame and longing. In *The Starch Solution*, bestselling diet doctor and board-certified internist John A. McDougall, MD, and his kitchen-savvy wife, Mary, turn the notion that starch is bad for you on its head. *The Starch Solution* is based on a simple swap: fueling your body primarily with carbohydrates rather than proteins and fats. This will help you lose weight and prevent a variety of ills. Fad diets come and go, but Dr. McDougall has been a proponent of the plant-based diet for decades, and his medical credibility is unassailable. He is one of the mainstay experts cited in the bestselling and now seminal *China Study*—called the "Grand Prix of epidemiology" by the *New York Times*. But what *The China Study* lacks is a plan. Dr. McDougall grounds *The Starch Solution* in rigorous scientific fact

and research, giving readers easy tools to implement these changes into their lifestyle with a 7-Day Quick Start Plan and 100 delicious recipes. This book includes testimonials from among the hundreds Dr. McDougall has received, including people who have lost more than 125 pounds in mere months as well as patients who have conquered lifethreatening illnesses such as diabetes and cardiac ailments.

Standard Methods for the Examination of Water and Wastewater

"The signature undertaking of the Twenty-Second Edition was clarifying the QC practices necessary to perform the methods in this manual. Section in Part 1000 were rewritten, and detailed QC sections were added in Parts 2000 through 7000. These changes are a direct and necessary result of the mandate to stay abreast of regulatory requirements and a policy intended to clarify the QC steps considered to be an integral part of each test method. Additional QC steps were added to almost half of the sections."-- Pref. p. iv.

How to Avoid a Climate Disaster

The Solutions We Have and the Breakthroughs We Need *Knopf*

#1 NEW YORK TIMES BEST SELLER • In this urgent, authoritative book, Bill Gates sets out a wide-ranging, practical—and accessible—plan for how the world can get to zero greenhouse gas emissions in time to avoid a climate catastrophe. Bill Gates has spent a decade investigating the causes and effects of climate change. With the help of experts in the fields of physics, chemistry, biology, engineering, political science, and finance, he has focused on what must be done in order to stop the planet's slide to certain environmental disaster. In this book, he not only explains why we need to work toward net-zero emissions of greenhouse gases, but also details what we need to do to achieve this profoundly important goal. He gives us a clear-eyed description of the challenges we face. Drawing on his understanding of innovation and what it takes to get new ideas into the market, he describes the areas in which technology is already helping to reduce emissions, where and how the current technology can be made to function more effectively, where breakthrough technologies are needed, and who is working on these essential innovations. Finally, he lays out a concrete, practical plan for achieving the goal of zero emissions—suggesting not only policies that governments should adopt, but what we as individuals can do to keep our government, our employers, and ourselves accountable in this crucial enterprise. As Bill Gates makes clear, achieving zero emissions will not be simple or easy to do, but if we follow the plan he sets out here, it is a goal firmly within our reach.

Introductory Statistics

Introductory Statistics is designed for the one-semester, introduction to statistics course and is geared toward students majoring in fields other than math or engineering. This text assumes students have been exposed to intermediate algebra, and it focuses on the applications of statistical knowledge rather than the theory behind it. The foundation of this textbook is Collaborative Statistics, by Barbara Illowsky and Susan Dean. Additional topics, examples, and ample opportunities for practice have been added to each chapter. The development choices for this textbook were made with the guidance of many faculty members who are deeply involved in teaching this course. These choices led to innovations in art, terminology, and practical applications, all with a goal of increasing relevance and accessibility for students. We strove to make the discipline meaningful, so that students can draw from it a working knowledge that will enrich their future studies and help them make sense of the world around them. What a Waste 2.0

A Global Snapshot of Solid Waste Management to 2050

World Bank Publications

Solid waste management affects every person in the world. By 2050, the world is expected to increase waste generation by 70 percent, from 2.01 billion tonnes of waste in 2016 to 3.40 billion tonnes of waste annually. Individuals and governments make decisions about consumption and waste management that affect the daily health, productivity, and cleanliness of communities. Poorly managed waste is contaminating the world's oceans, clogging drains and causing flooding, transmitting diseases, increasing respiratory problems, harming animals that consume waste unknowingly, and affecting economic development. Unmanaged and improperly managed waste from decades of economic growth requires urgent action at all levels of society. What a Waste 2.0: A Global Snapshot of Solid Waste Management to 2050 aggregates extensive solid waste data at the national and urban levels. It estimates and projects waste generation to 2030 and 2050. Beyond the core data metrics from waste generation to disposal, the report provides information on waste management costs, revenues, and tariffs; special wastes; regulations; public communication; administrative and operational models; and the informal sector. Solid waste management accounts for approximately 20 percent of municipal

budgets in low-income countries and 10 percent of municipal budgets in middle-income countries, on average. Waste management is often under the jurisdiction of local authorities facing competing priorities and limited resources and capacities in planning, contract management, and operational monitoring. These factors make sustainable waste management a complicated proposition; most low- and middle-income countries, and their respective cities, are struggling to address these challenges. Waste management data are critical to creating policy and planning for local contexts. Understanding how much waste is generated—especially with rapid urbanization and population growth—as well as the types of waste generated helps local governments to select appropriate management methods and plan for future demand. It allows governments to design a system with a suitable number of vehicles, establish efficient routes, set targets for diversion of waste, track progress, and adapt as consumption patterns change. With accurate data, governments can realistically allocate resources, assess relevant technologies, and consider strategic partners for service provision, such as the private sector or nongovernmental organizations. What a Waste 2.0: A Global Snapshot of Solid Waste Management to 2050 provides the most up-to-date information available to empower citizens and governments around the world to effectively address the pressing global crisis of waste. Additional information is available at <http://www.worldbank.org/what-a-waste>.
