Particles intermediate in size between those found in solutions and suspensions can be mixed in such a way that they remain evenly distributed without settling out. These particles range in size from 10^{-8} to 10^{-6} m in size and are termed colloidal particles or colloids. The mixture they form is called a colloidal dispersion.

A colloid is intermediate between a solution and a suspension. While a suspension will separate out a colloid will not. Colloids can be distinguished from solutions using the Tyndall effect. Light passing through a colloidal dispersion, such as smoky or foggy air, will be reflected by the larger particles and the light beam will be visible.

Activity 3 Solutions, Suspensions, and Colloids

The particles in a solution affect the colligative properties of the solution, while the particles in a colloid or suspension have no effect on colligative properties. Solutions do not exhibit the Tyndall Effect, while colloids and suspensions do. The Tyndall Effect

describes the scattering effect of dispersed particles on a beam of light. Particles in solution are too small relative to the wavelength of the light to cause scattering, but the particles in colloids and suspensions are large ...
