Concurrency Control And Recovery In

Concurrency control typically also ensures the Recoverability property of schedules for maintaining correctness in cases of aborted transactions (which can always happen for many reasons). Recoverability (from abort) means that no committed transaction in a schedule has read data written by an aborted transaction. Such data disappear from the database (upon the abort) and are parts of an incorrect database state.

Recovery in Distributed Databases. For concurrency control and recovery purposes, numerous problems arise in a... Failure of communication links. . The system must be able to deal with the failure of one or more of the ...

Overview of Concurrency Control and Recovery in ...

Concurrency control and recovery have become increasingly important as businesses rely more and more heavily on their on-line data processing activities. For high performance, the system must maximize concurrency by multiprogramming transactions.

Concurrency control and recovery in database systems (Book ...

Interaction with Concurrency Control.

The recovery scheme depends greatly on the concurrency-control scheme that is used. To roll back a failed transaction, we must undo the updates performed by the transaction. Suppose that a transaction T0 has to be rolled back, and a data item Q that was updated by T0 has to be restored to its old value. Using the log-based schemes for recovery, we restore the value by using the undo information in a log record.

Concurrency Control: Recovery with Concurrent Transactions ...

Concurrency control and recovery mechanisms are mainly concerned with the database access commands in a transaction. 8 The above two transactions submitted by any two different users may be executed

concurrently and may access and update the same database items (e.g. X).
