The Joukowski equation is a method of determining the surge pressures that will be experienced in a fluid piping system. When a fluid in motion is forced to either stop or change direction suddenly a pressure wave will be generated and propagated through the fluid. Hydraulic shock (colloquial: water hammer; fluid hammer) is a pressure surge or wave caused when a fluid, usually a liquid but sometimes also a gas, in motion is forced to stop or change direction suddenly; a momentum change. This phenomenon commonly occurs when a valve closes suddenly at an end of a pipeline system, and a pressure wave propagates in the pipe.

The Joukowsky equation for fluids and solids

The instantaneous waterhammer equation, often referred to as the Joukowsky Equation, can be used to predict the maximum head/pressure rise that will occur in a piping network due to an instantaneous velocity change. The severity of the pressure change is determined by the change in momentum, the wavespeed in the fluid, and the density of the fluid at the origin of the flow disturbance.
