In the "Pa lee" valve tester, a constant low voltage is applied and the current draio limited to well below saturation point. This low voltage is not sufficent to ionise gas if present in a valve and produce extra emission. Consequently, the "Palec" valve tester ig a true emission tester and showy the true condition of the cathode.

The tester is encased in a wooden stained box with various pin sockets for testing tubes and a milliammeter so measurements can be made of the plate current. Furthermore, there are switches for the zeroing of the milliammeter, for biasing of tubes and for the power to the unit. By placing the defective tube in the appropriate socket, selecting the power source input, i.e. AC or DC and throwing the biasing toggle switch to zero, the plate current can be determined via the milliammeter.
