The Fringe of Optics - PhET doprinos

Optics with diameters less than 3.00mm, such as micro-lenses or micro-prisms, are typically not beveled due to the likelihood of creating edge chips in the process. It is important to note that for small radii of curvature, for example, lenses where the diameter is $\geq 0.85 \times$ radius of curvature, no bevel is needed due to the large angle between the surface and edge of the lens.
