Guideline For Cognitive Impairment Is

Abstract. Cognitive impairment of cerebral small vessel disease (CSVD) is one of the most common cognitive disorders. It has a high incidence and results in heavy social burden; thus, it is essential to provide reasonable diagnosis and treatment in clinical practice. Based on the results of clinical research and related reports, combined with the actual situation in China, we propose a diagnosis and treatment guideline for cognitive impairment of CSVD.

Clinical practice guideline for cognitive impairment of ...

The guideline focuses on presumed idiopathic or neurodegenerative MCI—particularly relating to AD—rather than mild cognitive changes relating to potentially reversible causes

(e.g., metabolic, vascular, systemic, or psychiatric disorders) or Parkinson disease-MCI or vascular cognitive impairment, as these may have different epidemiologic and treatment spectra than AD.

Practice guideline update summary: Mild cognitive impairment

Overview. The WHO Guidelines on risk reduction of cognitive decline and dementia provide evidence-based recommendations on lifestyle behaviours and interventions to delay or prevent cognitive decline and dementia. Worldwide, around 50 million people have dementia and, with one new case every three seconds, the number of people with dementia is set to triple by 2050.

WHO | Risk reduction of cognitive decline and dementia

impairment of other cognitive features (e.g., language, visuospatial, executive) is more prominent.^{e2} This practice guideline focuses on MCI of presumed idiopathic or neurodegenerative origin rather than mild cognitive changes relating to potentially reversible causes such as metabolic, vascular, systemic, or psychiatric disorders.
