We gave a three step process, first to redraw the circuit with its impedance equivalent. So we replace all circuit elements with their impedances, all sources with their phasors. We use standard circuit methods to solve, node analysis, KVL, KCL, any of those methods. Just treat our impedance as if it was a complex resistor.

Electrical Power in AC Circuits and Reactive Power

Question 5 While studying DC circuit theory, you learned that resistance was an expression of a component's opposition to electric current. Then, when studying AC circuit theory, you learned that reactance was another type of opposition to current. Now, a third term is introduced: impedance.Like resistance and reactance, impedance is also a form of opposition to electric current.
