The Effective Fragment Molecular Orbital

Recently, we developed the effective fragment molecular orbital (EFMO) method, which builds upon the fragment molecular orbital (FMO) method -, and combines it with effective fragment potentials (EFP) -. EFMO is different from EFP, FMO and FMO/EFP, in several ways.

In this paper we have shown that the effective fragment molecular orbital (EFMO) method , can be used to efficiently map out enzymatic reaction paths provided the geometry of a large part of the enzyme and solvent is frozen. In EFMO one defines an active region associated with the active site, and the cost of a geometry optimization is then essentially the cost of running quantum-mechanical calculations of the active domain.

To predict functional liquid's properties, it is mandatory to apply ab initio MD (AIMD) calculations (e.g., Car-Parrinello MD, CPMD; fragment molecular orbital based MD, FMO-MD), in which intermolecular interaction is evaluated on a quantum mechanical level. However, because the computational costs of AIMD are much higher than
