On a phylogenetic tree, a monophyletic group includes a node and all of the descendants of that node, represented by both nodes and terminal taxa.

Cladistics is now accepted as the best  
method available for phylogenetic

analysis, for it provides an explicit and testable hypothesis of organismal relationships. The basic idea behind cladistics is that members of a group

share a common evolutionary history, and are "closely related," more so to members of the same group than to other organisms.
