Medicinal Plant Biotechnology

This unique overview of plants and transgenic techniques of great scientific, medicinal and economic value for both industry and academia covers the whole spectrum from cell culture techniques,

via genetic engineering and secondary product metabolism right up to the use of transgenic plants for the production of bioactive compounds.

Medicinal Plant Biotechnology | Wiley Online Books

Description. There have been rapid advances in the field of plant biotechnology in recent years, increasing the potential for medical application. Covering the latest advances in the use of plants to produce medicinal drugs and vaccines, this volume examines topics including plant tissue culture, secondary metabolite production, metabolomics and metabolic engineering, bioinformatics, molecular farming and future biotechnological directions, with contributors from key researchers in the

field.

Plant-based medicines play an important role in all cultures, and have been indispensable in maintaining health and combating diseases. The identification of active principles and their molecular targets from traditional medicine provides an enormous opportunity for drug development. Using modern biotechnology, plants with specific chemical compositions can be mass propagated and genetically improved for the extraction of bulk active pharmaceuticals.

**Biotechnology for Medicinal Plants |
SpringerLink**

Medicinal plants are the most important source of life saving drugs for the

majority of the world's population. The biotechnological tools are important to select, multiply and conserve the critical genotypes of medicinal plants. In-vitro regeneration holds tremendous potential for the production of high-quality plant-based medicine.

**Role of biotechnology in medicinal
plants**

Medicinal plant biotechnology is described as methodology to enhance the formation and accumulation of desirable natural products and possible product modification in medicinal plants. The subject is reviewed under the headings: cell technology (micropropagation, cell culture, hairy root culture) and gene technology (enhancement of productivity,

modification of products).
